I've just gone through this book and am I impressed. Theres no technical jargon, nor does the author talk down to us, it's like she is sitting next to me and walking through every single step. The really helpful part is that there are many concepts that are not only explained "how" to do them but "why".When I saw there was a supporting Web site I decided to test it out and see if a real person responded. She did and was quite helpful and pleasant, this author does care about us.The CD, well.. one of the CDs that come with the book had some bonus movie tutorials included. I had to unzip them but hey that's no big deal. I'd rather do that than not get them at all because of CD space (explained in the readme). I've worked with the Bezier tool before but was real clumsy when it came to editing them. The beziercurves movie really helped me finally grasp the idea.Ok, so what's in the book? I did a quick count and there are over 50 different projects andexercises, and not your

token scribbles to demonstrate a point, but real usable interfaces that I can reproduce myself. I liked the fact that I wasn't teased with a picture of a whole Web interface, and then only get the instructions for one small part of how to make it. Fireworks 4 f/x and Design includes many samples of the entire Web site or interface. There are even tips on how to place those pesky pop-up menus in Dreamweaver and how to edit them.This book helped me realize the degree of image editing I could really do in Fireworks. I had no idea how great it was for things like tonal control, the levels command and other color adjustments. You'll find collages made using masking techniques, plenty of navigation solutions, learn how to make your own commands and use special effects.
